

CONTRACT & HOSPITALITY

MONITOR

POTSDAM | RAILWAY STATION | LAMINAM

Potsdam railway station, just outside Berlin, is an essential city hub for public transport. After more than 20 years of its construction - its design dates back to the 1990s - the especially worn out common interior spaces needed an intervention. The original architectural interpretation by GMP Architekten in Hamburg was preserved by KSP Jürgen Engel Architekten GmbH, which carried out the renovation project by focusing on the new flooring. Ceramic tiles of large format and minimum thickness from the collection I Naturali, Pietra di Savoia Avorio by **Laminam**, cover the floor for a total area of 6,500 square meters. Thanks to their uneven surfaces, the textures - and the stones that inspire them - are designed to prevent slipping and combine aesthetic qualities with strong resistance to impacts, scratches, stains, and chemical spills.
